

## REMARKS

Claims 1-11 are pending and under consideration.

Using independent claim 1 as an example, this claim recites retrieving emulation information from the emulation information stored in the first memory having an emulation information type matching the type of the emulation information analyzed and replacing the emulation information stored in the second memory with the retrieved emulation information, and storing the retrieved emulation information into the predetermined storage area of the second memory in which the replaced emulation information was stored.

In contrast, Mochizuki searches for an emulator, but does not store the emulator in the memory. More specifically, Mochizuki relates to effectively searching for an emulator suitable for printing data that has entered into a buffer. The replacement of the emulator in Mochizuki is for effective searching for an emulator suitable for printing data, however, Mochizuki does not effectively use memory as compared to the invention of claim 1.

Independent claims 3, 7 and 10 recite features somewhat similar to those discussed with respect to claim 1.

The remaining references do not overcome these deficiencies.

There being no further outstanding objections or rejections, it is submitted that the application is in condition for allowance. An early action to that effect is courteously solicited.

Finally, if there are any formal matters remaining after this response, the Examiner is requested to telephone the undersigned to attend to these matters.

If there are any additional fees associated with filing of this Amendment, please charge the same to our Deposit Account No. 19-3935.

Respectfully submitted,

STAAS & HALSEY LLP
